

2017-11-30

Dear supporters,

Dear friends,

It has been a while since I last communicated with you.

I have organized a small study group consisting of medical doctors, scientists, businessmen and housewives to review and discuss the internal radiation issues of the March 11, 2011 Fukushima Daiichi Nuclear Plant accident. We have met almost every month for the past three years, and finally in early 2016 we decided to establish a laboratory to inspect deciduous teeth of our children. Details of the laboratory, its structure (a benefit type corporation: HaHa, Inc.) and objective are provided in the attached memo titled "HaHa, Inc. Executive Summary".

We have initiated the first round of investment during the period July 1–September 30, 2017. I am happy to advise you that we raised over 15,000,000 Yen with over 350 individual investors in our first round of investment. We are launching the second round investment from October 1 to December 31, 2017. Our target is to raise 50,000,000 Yen by March 31, 2018.

I would appreciate it if you can review the enclosed Executive Summary and let me know your comments and candid opinion. We are eager to establish a good cooperation with you.

Best regards,

Eisuke Matsui MD

President

HaHa, Inc.
